| QUALIFICATION CODE: 07BOSC | LEVEL: 6 |
| COURSE CODE: APP601S | COURSE NAME: ANALYTICAL PRINCIPLES AND <br> PRACTICE |
| SESSION: JULY 2019 | PAPER: THEORY |
| DURATION: 3 HOURS | MARKS: 100 |

| SUPPLEMENTARY/SECOND OPPORTUNITY EXAMINATION QUESTION PAPER |  |
| :--- | :--- |
| EXAMINER(S) | DR JULIEN LUSILAO |
| MODERATOR: | PROF OMOTAYO AWOFOLU |

## INSTRUCTIONS

1. Answer ALL the questions in the answer book provided.
2. Write and number your answers clearly.
3. All written work MUST be done in blue or black ink.

ATTACHMENTS
List of useful tables, formulas and constants

THIS QUESTION PAPER CONSISTS OF 10 PAGES (Including this front page and attachments)

## Question 1: Multiple Choice Questions

Choose the best possible answer for each question.
1.1 Which of the following glassware is not recommended for accurate measurements of volumes?
(A) A graduated cylinder
(B) A volumetric flask
(C) A volumetric pipette
(D) A measuring pipette
1.2 A chemical or physical principle that can be used to study an analyte is called
(A) A technique
(B) A procedure
(C) A protocol
(D) A method
1.3 The ability of an analytical balance to measure the smallest detectable increment of mass is called
(A) The balance accuracy
(B) The balance precision
(C) The balance sensitivity
(D) None of the above
1.4 In statistics, the precision of repeated measurements is characterised by
(A) The standard deviation
(B) The relative standard deviation
(C) The variance
(D) All of the above
1.5 An amphoteric substance
(A) Has neither acid or base properties
(B) Turns litmus paper red and blue
(C) Is insoluble in base, but dissolves in an acid
(D) Reacts with both an acid and a base
1.6 Consider the equilibrium reaction

$$
\begin{equation*}
4 \mathrm{NH}_{3}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightleftharpoons 2 \mathrm{~N}_{2}(\mathrm{~g})+6 \mathrm{H}_{2} \mathrm{O}(\mathrm{~g}) \quad \Delta \mathrm{H}=-1268 \mathrm{~kJ} \tag{2}
\end{equation*}
$$

Which change will cause the reaction to shift to the right?
(A) Increase the temperature
(B) Decrease the volume of the container.
(C) Add a catalyst to speed up the reaction.
(D) Remove the gaseous water by allowing it to react and be absorbed by KOH .
1.7 Sodium nitrate, heated in the presence of an excess of hydrogen, forms water according to the two-step process

$$
\begin{gathered}
2 \mathrm{NaNO}_{3} \rightarrow 2 \mathrm{NaNO}_{2}+\mathrm{O}_{2} \\
2 \mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}
\end{gathered}
$$

From the reactions above, how many grams of sodium nitrate are required to form 9 grams of water?
(A) 21.3
(B) 42.5
(C) 69.0
(D) 85.0
1.8 What is the molarity of the sulphate ion in a solution prepared by dissolving 17.1 g of aluminium sulphate, $\mathrm{Al}_{2}\left(\mathrm{SO}_{4}\right)_{3}$, in enough water to prepare 1.00 L of solution? Neglect any hydrolysis.
(A) $1.67 \times 10^{-2} \mathrm{M}$
(B) $5.00 \times 10^{-2} \mathrm{M}$
(C) $1.50 \times 10^{-1} \mathrm{M}$
(D) $2.50 \times 10^{-1} \mathrm{M}$
1.9 A reaction for which $\Delta \mathrm{H}<0$ and $\Delta \mathrm{S}<0$ is most likely to have which of these thermodynamic properties?
(A) The reaction cannot be spontaneous at any temperature.
(B) The reaction will tend to be spontaneous at low temperatures.
(C) The reaction will tend to be spontaneous at high temperatures.
(D) The spontaneity of the reaction will be independent of temperature.
1.10 Consider the equilibrium reaction

$$
\mathrm{Cd}^{2+}(\mathrm{aq})+4 \mathrm{NH}_{3}(\mathrm{aq}) \rightleftharpoons \mathrm{Cd}\left(\mathrm{NH}_{3}\right)_{4}^{2+}(\mathrm{aq})
$$

The equilibrium constant of the reaction is called
(A) Overall formation constant
(B) Stepwise formation constant
(C) Cumulative formation constant
(D) Both (A) and (C)

## Question 2

2.1 A group of scientists used radioactive isotopes to date sediments from lakes and estuaries. To verify this method, they analysed a ${ }^{208} \mathrm{Po}$ standard known to have an activity of 77.5 decays $/ \mathrm{min}$ and obtained the following results.

| 77.09 | 75.37 | 72.42 | 76.84 | 77.84 | 76.69 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 78.03 | 74.96 | 77.54 | 76.09 | 81.12 | 75.75 |

Determine whether there is a significant difference between the mean and the expected value at $\mathrm{a}=0.05$.
2.2 Two analytical chemists have reported a method for monitoring the concentration of $\mathrm{SO}_{2}$ in air. They compared their method to the standard method by analysing urban air samples collected from a single location. Samples were collected by drawing air through a collection solution for 6 min . Shown here is a summary of their results with $\mathrm{SO}_{2}$ concentrations reported in $\mathrm{mL} / \mathrm{m}^{3}$.

| standard | 21.62 | 22.20 | 24.27 | 23.54 |
| :--- | :--- | :--- | :--- | :--- |
| method: | 24.25 | 23.09 | 21.02 |  |
| new | 21.54 | 20.51 | 22.31 | 21.30 |
| method: | 24.62 | 25.72 | 21.54 |  |

Using an appropriate statistical test determine whether there is any significant difference between the standard method and the new method at $a=0.05$.

## Question 3

3.1 A standard sample contains $10.0 \mathrm{mg} / \mathrm{L}$ of analyte and $15.0 \mathrm{mg} / \mathrm{L}$ of internal standard. Analysis of the sample gives signals for the analyte and internal standard of 0.155 and 0.233 (arbitrary units), respectively. Sufficient internal standard is added to a sample to make its concentration $15.0 \mathrm{mg} / \mathrm{L}$. Analysis of the sample yields signals for the analyte and internal standard of 0.274 and 0.198 , respectively. Report the analyte's concentration in the sample.
3.2 Serum containing $\mathrm{Na}^{+}$gave a signal of 4.27 mV in an atomic emission analysis. Then 5.00 mL of 2.08 M NaCl were added to 95.0 mL of serum. This spiked serum gave a signal of 7.98 mV .
(a) What is the actual concentration of $\mathrm{Na}^{+}$spiked in the sample?
(b) Find the original concentration of $\mathrm{Na}^{+}$in the serum.
(c) What calibration method has been used here?
(c) What calibration method has been used here?
(d) Briefly explain your choice of the calibration method.
(e) When would you recommend the use of this calibration method?

## Question 4

4.1 Given the following unbalanced redox reaction:

$$
\mathrm{ClO}^{-}(\mathrm{aq})+\mathrm{I}^{-}(\mathrm{aq}) \rightleftharpoons \mathrm{IO}_{3}^{-}(\mathrm{aq})+\mathrm{Cl}^{-}(\mathrm{aq}) \text { Basic solution. }
$$

(a) Write the balanced oxidation and reduction half reactions as well as the overall reaction.
(b) Calculate the standard state potential $\left(E^{0}\right)$ of the reaction $\left(E_{c l 0-/ C l-}^{0}=+0.890 \mathrm{~V} ; E_{103-/ 1 /}^{0}=+0.257 \mathrm{~V}\right)$
(c) Calculate the equilibrium constant ( $K$ ) of the reaction.
4.2 Calculate the ionic strength of a 0.050 M NaCl solution.
4.3 Calculate the pH of the following acid-base buffer: 5.00 g of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ and 5.00 g of $\mathrm{NaHCO}_{3}$ diluted to $100 \mathrm{~mL}\left(K_{a}\left(\mathrm{HCO}_{3}{ }^{-}\right)=4.69 \times 10^{-11}\right)$.
4.4 Write the charge balance and mass balance equations for a 0.10 M NaCl solution.

## Question 5

5.150 .0 ml of 0.1 M NaCN is titrated with $0.1 \mathrm{M} \mathrm{HNO}_{3}\left(K_{a}\right.$ for $\left.\mathrm{NaCN}=6.20 \times 10^{-10}\right)$.
(a) Write the balanced reaction of the titration (only show the ions participating in the reaction).
(b) Calculate the volume of $\mathrm{HNO}_{3}$ added at the equivalence point.
(c) Calculate the pH after addition of the following volumes of the titrant
(i) 0.0 mL of added $\mathrm{HNO}_{3}$
(ii) 25.0 mL
(iii) 50.0 mL
5.250 .0 mL of 0.0250 M KI was titrated with $0.0500 \mathrm{M} \mathrm{AgNO}_{3}\left(K_{s p}(\mathrm{AgI})=8.3 \times 10^{-17}\right)$.
(a) Write the reaction involved in the titration (show only the ions participating in the reaction).
(b) Calculate the value of equilibrium constant for the reaction in (a).
(c) Calculate the volume of titrant added at the equivalence point.
(d) Calculate pl for the following volume of added $\mathrm{AgNO}_{3}$
(i) 10.0 mL
(ii) 25.0 mL
(iii) 30.0 mL
5.3 (a) What is an indirect gravimetric analysis?
(b) Give two important attributes of precipitation gravimetric analysis.

Data Sheet
$t_{\text {calculated }}=\frac{|\bar{x}-\mu|}{s} \sqrt{N} \quad t_{\text {calculated }}=\frac{\bar{d}}{s_{d}} \sqrt{n}$
$s_{\text {pooled }}=\sqrt{\frac{\mathrm{s}_{\mathrm{a}}^{2}\left(N_{\mathrm{a}}-1\right)+\mathrm{s}_{\mathrm{b}}^{2}\left(N_{\mathrm{b}}-1\right)+\ldots \ldots . .}{N_{\mathrm{a}}+N_{\mathrm{b}}+\ldots \ldots .-N_{\text {sets of data }}}} \quad t_{\text {calculated }}=\frac{\left|\bar{x}_{a}-\bar{x}_{b}\right|}{s_{\text {pooled }}} \times \sqrt{\frac{\mathrm{n}_{\mathrm{a}} \times \mathrm{n}_{\mathrm{b}}}{\mathrm{n}_{\mathrm{a}}+\mathrm{n}_{\mathrm{b}}}}$
$\boldsymbol{\mu}=\overline{\mathrm{x}} \pm \frac{\mathrm{ts}}{\sqrt{\mathrm{n}}}$
