<b>QUALIFICATION: BACHELOR OF TECHNOLOGY IN ACCOUNTING AND FINANCE</b>	
<b>QUALIFICATION CODE: 23BACF</b>	<b>LEVEL: FOURTH YEAR</b>
<b>COURSE CODE: MAF411S</b>	<b>COURSE NAME: MANAGERIAL FINANCE 4A</b>
<b>SESSION: JANUARY 2019</b>	<b>PAPER: THEORY AND CALCULATIONS</b>
<b>DURATION: 3 HOURS</b>	<b>MARKS: 100</b>

<b>SECOND OPPORTUNITY EXAMINATION QUESTION PAPER</b>	
<b>EXAMINER(S)</b>	E. Mushonga
<b>MODERATOR:</b>	G. Bowa

<b>INSTRUCTIONS</b>
<ol style="list-style-type: none"><li>1. Answer ALL the questions.</li><li>2. Start each question on a new page</li><li>3. Write clearly and neatly.</li><li>4. Number the answers clearly.</li><li>5. Round off only final answers to one decimal places</li></ol>

**PERMISSIBLE MATERIALS**

1. Scientific calculators

**THIS QUESTION PAPER CONSISTS OF 8 PAGES** (Including this front page)

**QUESTION 1****[28 Marks]**

(a) In the context of the Capital Asset Price Model (CAPM):

- (i) Explain the meaning of systematic risk and unsystematic risk (5 marks)
- (ii) Define the concept of Beta and outline how it is measured (3 marks)
- (iii) Define the term risk premium and explain how it can be calculated (5 marks)

(b) Tinto Ltd wishes to invest in a project. The following is available:

	<b>Tinto</b>	<b>Project</b>	<b>Market</b>
Expected returns	10%	16%	14%
Standard deviation of returns	5%	7%	4%
Expected returns correlation with the market	+0.3	+0.6	1

The risk free rate is 6%. Correlation between Tinto and the project is +0.1. If the project is accepted it will account for 10% of the value of Poly Corp Ltd.

**Required:**

Calculate:

- (i) The beta for Tinto and the project. (3 marks)
- (ii) Tinto's current cost of equity. (3 marks)
- (iii) The return of Tinto after accepting the project. (3 marks)
- (iv) The risk of Tinto after accepting the project. (3 marks)
- (v) The project's required return based on the CAPM. (3 marks)

**QUESTION 2****[30 Marks]**

My-pattern Investments Ltd is considering the investment in a new project to produce a wide range of colourful chocolates. This project will be the largest the company has ever attempted. According to initial estimations the project will require an initial investment of N\$14 million. The project involves the development of a manufacturing plant on the Western Cape coast. Although management understands the principles of cost of capital, they don't know exactly how to calculate the rate. My-pattern Investments Ltd's management approached you for advice, since you are regarded as an expert in this field.

You are provided with the following information:

<b>Extracts from the Profit &amp; Loss Statement for the year ended 28 February 2017</b>	
	N\$
Depreciation	250 000
Interest paid	225 000
Preference dividends	134 400
Ordinary dividends	80 000

<b>Statement of financial position as at 28 February 2017</b>	
	N\$
Stated share capital (1 000 000 @ N\$3 share)	3 000 000
Share premium	250 000
Retained Income	450 000
	<b>3 700 000</b>
Preference shares	1 120 000
Loan	1 800 000
Debentures (60 000 Debentures)	480 000
	<b>7 100 000</b>

**NOTES:****Ordinary shares**

The company recently had a rights issue of 40 000 shares at a premium. All previous share issues were at N\$3 per share. The rights issue was at a 10% discount to market value, which had resulted in the current market price per share of N\$10.28. Eight

months ago My-pattern Investments' beta was calculated at 1.2. According to market indicators the return in the food sector is 21%. The return on the market as a whole however is 19.4%. Current capital market rates are:

Nampower - 15.1%

Government bond - 14.7%

### **Preference shares**

The return on similar preference share is 13%. The shares are partly (40%) redeemable in 4 years and the balance in 8 years. Redemption will be at a premium of 10%.

### **Loan**

According to the loan holder the loan can be redeemed at N\$1 650 000. The loan contract is for a 10 year period.

### **Debentures**

The debentures are non-interest bearing instruments. According to the debenture deed the debentures will be redeemable in 9 years' time. These debentures are currently trading at N\$6.50 each. According to analysts the market requires 15% on similar investments.

You may assume the following:

- That the market does not know about the project.
- Tax rate is 28%
- Food Inflation rate is 9.8%

### **Required:**

- a) Determine the Weighted Average Cost of Capital for the project (25 marks)
- b) Briefly explain what effect the choice of a financing source should have on the cost of capital (3 marks)
- c) Explain the effect of the past few months' market fluctuations (exchange rates, interest rates, etc) on a companies' cost of capital in general. (2 marks)

### QUESTION 3

[20 Marks]

Extensive research is being done in Africa on alternative methods of electricity generation. There are still many parts of Africa that do not have electricity, and therefore there is a huge gap in the market for suppliers that can provide ordinary people with their own electricity generation capacity via solar panels. This strategy is seen as a superior alternative to the supply of electricity through extensive networks distributing energy from coal operated generators to remote villages. Solar panels for home use are becoming increasingly affordable for many households and therefore economically excluded rural populations can hopefully access energy affordably in the near future.

James Indongo, your former university residence roommate, recently graduated with an engineering degree from the Namibia University of Science and Technology. James approached you for assistance in commercialising his solar panel invention. He is convinced that if his invention could be commercialised and manufactured at a grand scale, it will make a big difference in the lives of many people in Africa. He wants to set up a business to manage the manufacturing and distribution of his invention into the market and does not mind if he doesn't control the business, as long as it is run effectively and makes a difference in the lives of people by providing an affordable source of energy. James is a Namibian citizen. According to James' calculations, his business will probably not make a profit for at least the first five years of its existence, but it might even take longer than that before the business starts to make a profit.

James plans to name his business "Energy Enterprise" and wants to set it up as a profitable business that would create jobs and provide investors with a decent return, but at the same time sells an affordable product that poor people can acquire. He believes that in order to achieve this, Energy Enterprise should manufacture and sell a significant amount of units in order for economies of scale to facilitate a low selling price whilst also yielding a decent return for investors. James calculated that he requires N\$20 million in order to set up and run his business for at least the first year of existence. He inherited a house in Windhoek from his uncle which has a market value of N\$4 million, but other than that James does not own any assets.

James has the following two funding options available in order to raise N\$20 million:

- A loan from the African Development Bank. The bank has agreed to very favourable repayment terms whereby Energy Enterprise will only need to start repaying the loan and interest after 5 years;
- An investment in the shares of Energy Enterprise by a private equity firm. The private equity firm has agreed that James will be retained as CEO of Energy Enterprise for at least 5 years.

**Required:**

- a) Explain the various factors that James should consider in choosing between the two funding options AND recommend the most suitable option that he should take. *(15 marks)*
- b) Advise James on five other sources of finance or finance structures that he might not be aware of or might not have considered yet, that could fund his business. *(5 marks)*

**Question 4**

**[22 MARKS]**

Ithemba Engineering (Pty) Ltd ('Ithemba') manufactures and distributes specialised products to customers in the construction industry. Every year, Ithemba invests significantly in research and development to improve existing product designs and to develop new products. Many of its products and designs have been patented to protect the company's intellectual property. Ithemba is registered in South Africa and listed on the Johannesburg Stock Exchange (JSE). It focuses on supplying Southern Africa customers. It has supported customers' expansion into the rest of Africa and the Middle East and exports represent approximately 10% of annual revenue. Foreign subsidiaries of South African groups are invoiced in US dollar.

The construction industry in Southern Africa has been under significant pressure in recent years due to the slowdown in the global economy and limited infrastructure spending by the governments. As a result, Ithemba has struggled to grow revenue during the past three financial years. Steel is the major raw material used by Ithemba in its manufacturing processes. The volatility of this commodity's price in recent years has placed additional pressure on the company's gross profit margin. Because of this situation, working capital management has become increasingly important for Ithemba. More and more customers are placing orders at the last moment, which is forcing Ithemba to hold larger inventories. Customers are also delaying payment of accounts because of cash flow pressures. All sales

are on credit and Ithemba allows customers 60 days from invoice date to pay amounts due. The result is that Ithemba's overdraft balance has steadily increased in recent years, to the extent that this has become a permanent source of finance. Ithemba currently pays interest on its overdraft at 20% per annum, compounded monthly. The industry growth rate has remained constant at 5% for the past two years.

Apart from the overdraft, Ithemba has had no other debt facilities since 2009. Bankers are reluctant to grant Ithemba longer term finance due to concerns about the company's cash flow generation and the negative outlook for the construction industry in general.

The following are extracts from the annual financial statements of Ithemba for the year ended 30 December 2017:

**EXTRACT FROM THE STATEMENT OF COMPREHENSIVE INCOME FOR THE YEAR  
ENDED 30 DECEMBER**

	<b>2017</b>	<b>2016</b>
	<b>N\$000</b>	<b>N\$000</b>
Revenue	248 230	241 000
Cost of sales	157 580	144 400
<b>Gross Profit</b>	<b>90 650</b>	<b>96 600</b>
Bad debts	5 100	4 500
Depreciation	19 800	20 100
Research and Development cost	10 200	11 100
Other operating costs	28 750	26 700
<b>Operating Profit</b>	<b>26 800</b>	<b>34 200</b>
Finance charges	12 750	10 800
<b>Profit Before Tax</b>	<b>14 050</b>	<b>23 400</b>

**EXTRACTS FROM THE STATEMENT OF FINANCIAL POSITION AS AT 30 DECEMBER**

	<b>2017</b>	<b>2016</b>
	<b>N\$000</b>	<b>N\$000</b>
Trade receivables	51 000	42 900
Shareholders' equity	152 200	142 100
Bank overdraft	127 500	102 800
Inventory	28 060	21 750

REQUIRED	MARKS
<p>Analyse and discuss the profitability and working capital management of Ithemba during the financial years ended 30 December 2016 and 2017. Support your answer with relevant calculations and ratios. Your analysis should only look at the following ratios:</p> <ul style="list-style-type: none"> <li>• Revenue growth</li> <li>• Gross profit margin</li> <li>• Effective interest rate %</li> <li>• Inventory turnover</li> <li>• Trade receivable days</li> <li>• Return on Equity (ROE)</li> <li>• Return on Capital Employed (ROCE)</li> </ul> <p>(Work to two decimal places. Assume a 28% tax rate, 365 days in a year and round all days up to the next whole day)</p>	<p><b>22</b></p>
