## QUESTION 4

(20 Marks)
Angie Silva has recently opened The Sandal Shop in Rundu, a store that specializes in fashionable sandals. Angie has just received a degree at the NUST and she is anxious to apply the principles she has learned. In time, she hopes to open a chain of sandal shops. As a first step, she has prepared the following analysis for her new store:

| Sales price per pair of sandals | N\$400 |
| :---: | :---: |
| expenses per pair of sandals | 160 |
| Contribution margin per pair of sandals | N\$240 |
| Pair of sandals sold | 320 |
| Fixed expenses per year: |  |
| Building rental | N\$15000 |
| Equipment depreciation | 7000 |
| Selling expenses | 20000 |
| Administrative expenses | 18000 |
| Total fixed expenses | N\$60000 |

## REQUIRED:

4.1 Calculate how many pairs of sandals must be sold each year to break even in units and $\mathbf{N} \$$.
4.2 Angie has decided that she must earn at least $N \$ 31200$ as profit in the first year to justify her time and effort. Calculate how many pairs of sandals must be sold to reach this target profit.
4.3 Angie now has two salespersons working in the store - one full time and one part time. It will cost her an additional fixed expense $\mathrm{N} \$ 40000$ per year to convert the part-time position to a full-time position. Angie believes that the change will bring in additional 300 pair of sandals annually. Would you recommend her to change the position? Justify.
