Suppose your entity is contemplating to purchase a new motor vehicle as a way of increasing its fleets in five years' time. The value of the motor vehicle is estimated at N\$350 000. No deposit would be required. In order to make this happen, your entity decides to invest N\$25 000 at 12% per annum each year for the next five years. The investment should be made at the end of each year. Accordingly, your entity would be required to top up for any shortfall should there be any. Luckily, your entity's bank is willing to finance the shortfall, payable at 10% interest per annum over five years' equal annual instalments.
