FACULTY OF COMMERCE, HUMAN SCIENCES AND EDUCATION

DEPARTMENT OF ECONOMICS, ACCOUNTING AND FINANCE

QUALIFICATION: BACHELOR OF ACCOUNTING	
QUALIFICATION CODE: 07BOAC	**LEVEL:** 7
COURSE CODE: GMA711S	**COURSE NAME:** MANAGEMENT ACCOUNTING 310
SESSION: JULY 2023	**PAPER:** THEORY AND CALCULATIONS
DURATION: 3 HOURS	**MARKS:** 100

INSTRUCTIONS
1. Answer ALL the FOUR (4) questions in blue or black ink only. **NO PENCIL**
2. Start each question on a new page, number the answers correctly and clearly.
3. Write clearly, neatly and show all your workings/assumptions.
4. Round off final answers to two (2) decimal places
5. Questions relating to this examination may be raised in the initial 30 minutes after the start of the examination. Thereafter, candidates must use their initiative to deal with any perceived error or ambiguities and any assumptions made by the candidate should be clearly stated.

PERMISSIBLE MATERIALS

1. Silent, non-programmable calculators

THIS QUESTION PAPER CONSISTS OF _5_ PAGES (excluding this front page and tables)

QUESTION 1 [25 MARKS]

SBA is a company that produces televisions and components for televisions. The company has two divisions, Division S and Division B. Division S manufactures components for televisions. Division S sells components to Division B and to external customers. Division B uses five of the components in each of the televisions that it manufactures and sells televisions directly to external customers.

Division S

Budgeted variable manufacturing cost per component	N$
Direct material	14
Direct labour	18
Variable overhead	12

The following information relating to next year is also available:

Fixed costs	N$560 000
Production capacity	175 000 components
External demand	150 000 components
Potential demand from Division B	80 000 components
Anticipated external market price for a component	N$50

Division B

	N$
Sales price	450
Budgeted variable manufacturing cost per television	
Direct material	40
Direct labour	62
Variable overhead	16

In addition to the variable costs above, each television produced needs five components. Fixed costs are budgeted to be N$1 460 000 for next year. Annual sales of televisions are expected to be 16 000 units.

Transfer Pricing Policy:

- Transfer prices are set at opportunity cost.
- Division S must satisfy the demand of Division B before selling components externally.
- Division B is allowed to purchase components from Division S or from external suppliers.

REQUIRED		MARKS
a)	Define transfer pricing and differentiate the three main methods of transfer pricing	7

b)	Assume that Division B buys all the components it requires from Division S. Produce a profit statement for each division detailing sales and costs, showing external sales and internal company transfers separately where appropriate.		11
c)	Division S has just received an enquiry from a new customer to produce 25 000 components. The manager of Division S requires a total profit for the year for the division of N$450 000. Calculate the minimum price per component to sell the 25 000 components to the new customer that would enable the manager of Division S to meet the profit target. Note: this order will have no effect on the divisional fixed costs and no impact on the 150 000 components Division S sells to its existing external customers at N$50 per component. Division B will continue to purchase the 80 000 components it requires from the specialist external supplier.		7

QUESTION 2 [25 MARKS]

PQP Company is a wholesaler of books which is keen to explore the financial implications of making a significant investment in equipment and the development of a website. Due to the fast-changing nature of the equipment and the Internet software, PQP's management has set a project lifetime of four years, i.e., the equipment will be replaced, and a new website designed. An amount of N$300 000 will be paid for the new equipment at the beginning of the project. The company's costs behave in such a way that its contribution to sales ratio is expected to be 40% and its net margin 10%.

Sales estimates are shown below:

	Total sales if no investment	Total sales with investment
	N$ 000	N$ 000
Year 1	12 400	12 950
Year 2	13 250	13 380
Year 3	13 620	14 340
Year 4	14 000	15 000

Variable costs and the selling price are expected to remain stable in order to remain competitive over the duration of the project. Initial working capital of N$20 000 will be required at the start of the project. The suppliers will be paid a retaining/advisory fee of N$120 000 in year 1, N$150 000 in year 2 and N$170 000 and N$190 000 in year 3 and 4, respectively. The

residual value at the end of the project will be N$30 000. PQP paid consultancy fees of N$150 000 to experts who worked on the equipment.

Additional information:
- PQP has cost of capital of 14% and pays tax at an annual rate of 32%.
- It can claim capital allowances on a 25% reducing balance basis.
- Half of the tax is payable in the year it is incurred and half the following year and there has sufficient taxable profits from other parts of its business to enable the offset of any pre-tax losses on this project

REQUIRED	MARKS
Use the Net Present Value (NPV) technique to evaluate whether PQP should go ahead with the project or not	25

QUESTION 3 [25 MARKS]

Windhoek Renovations is a 100% Namibian owned plant hire and earth moving equipment company and was established in 1987. They offer years of experience in the plant hire and earth moving sector in Namibia. Striving forward has always been their focus, by suiting their customer's plant hire needs with their best services possible and bringing their expert plant hire and earth moving advice to every job site.

Information concerning the operations of Windhoek Renovations is as follows:
- It is company policy to hire all plant and machinery required for the implementation of all orders obtained, rather than to purchase its own plant and machinery.
- Windhoek Renovations will enter into an advance hire agreement contract for the coming year at one of the three levels – high, medium, or low, which correspond to the requirements of a high, medium, or low level of orders obtained.
- The level of orders obtained will not be known when the advance hire agreement contract is entered into. A set of probabilities have been estimated by management as to the likelihood of the orders being high, medium, or lower level.
- Where the advance hire agreement entered is lower than that required for the level of orders obtained, a premium rate must be paid to obtain additional plant and machinery required.
- No refund is obtainable where the advance hire agreement for plant and machinery is at a level more than that required to satisfy the site clearance and preparation orders obtained.

A summary of the information relating to the above points is as follow:

Level of orders	Revenue	Probability	Plant and machinery hire costs	
			Advance hire	Conversion premium
	N$000		N$000	N$000
High	15 000	25%	2 300	
Medium	8 500	45%	1 500	
Low	4 000	30%	1 000	
Low to medium				850
Medium to high				1 300
Low to high				2 150

Variable costs are 70% of turn over.

REQUIRED		MARKS
a)	Prepare a summary which shows the forecast net margin earned by Windhoek Renovations for the coming year for each possible outcome.	15
b)	Based on maximising expected value, calculate for Windhoek Renovations whether the advance contract for the hire of plant and machinery should be at low, medium, or high level.	10

QUESTION 4 [25 MARKS]

August Twenty-Six Manufacturing (Pty) Ltd is a manufacturer of Specialised Garments, Footwear and Leather products such as Personal Protective Wear, Corporate wear, School Uniforms and Shoes. August Twenty-Six has many trading divisions and Return on Investment (ROI) is the main measure of each division's performance. Each divisional Manager's salary is linked only to their division's ROI. The following information relating to Mega division summarises the financial performance of the three years including the projected figures for 2023.

	2021	2022	2023
Turnover	400 000	400 000	400000
Cost of sales	240 000	240 000	240 000
Gross profit	160 000	160 000	160 000
Other operating costs	120 000	104 000	98 000
Operating profit	40 000	56 000	62 000
Capital invested as at the end of the year	400 000	320 000	256 000

Other operating costs include asset depreciation calculated at the rate of 20% per annum on a reducing balance basis. The figures shown in the above table for the capital invested as at the end of the year is the net book value of the division's non-current assets. At the beginning of 2023, the Manager of the Mega division considered investing in an additional machine to boost production capacity. The new machine will cost N$100 000 with an expected life of five years depreciated using the same depreciation rate as the existing machinery on straight line method. The new machine will increase sales by 10% and costs by 3%. The divisional cost of capital is 8% per annum. The company has evaluated the investment and correctly determined that it has a positive Net Present Value (NPV) of N$24 536.

REQUIRED		MARKS
a)	Calculate the return on investment (ROI) for three-year period (i.e., without the new investment).	3
b)	Calculate ROI for 2023 after considering the new investment and comment on whether the Management of Mega Division will still go ahead with the new investment	11
c)	Using Residual Income (RI) comment on whether Management of Mega Division will go ahead with the new investment	11

END OF EXAMINATION PAPER
