| DURATION: 3 HOURS | MARKS: 100 |

SECOND OPPORTUNITY / SUPPLEMENTARY: EXAMINATION QUESTION PAPER

EXAMINER:
MODERATOR:

## Dr, Dismas Ntirampeba

Mr, Jonas Amunyela

## INSTRUCTIONS:

1. Answer all questions on the separate answer sheet.
2. Please write neatly and legibly.
3. Do not use the left side margin of the exam paper. This must be allowed for the examiner.
4. No books, notes and other additional aids are allowed.
5. Mark all answers clearly with their respective question numbers.

## PERMISSIBLE MATERIALS:

1. Non-Programmable Calculator

## ATTACHEMENTS

1. Z Table

This paper consists of 4 pages including this front page

## Question 1 [20 marks]

1.1 Briefly explain the following terminologies as they are applied in set theory and probability theory.

| (i) Set | $[2]$ |
| :--- | :--- |
| (ii) Size of a set | $[2]$ |
| (iii) Sample space | $[2]$ |
| (iv) Event | $[2]$ |
| (v) Mutually exclusive events (say $A$ and $B$ ) | $[2]$ |

1.2 Consider the sample space $S=\{1,2,3,4,5,6,7,8,9,10\}$ and the events $A=\{1,2,5,6\}$, $B=\{3,4,5,6,7\}, C=\{2,4,6\}, D=\{1,3,6\}, E=\{1,2,5,9\}$.
(i) Are A, B, C, D, and E pairwise mutually exclusive? Explain why.

Assuming that all elements are equiprobable, find:
(ii) $P(S-S)$
(iii) $P(\overline{A \cup C})$
(iv) $P(E-D)$

## Question 2 [20 marks]

2.1 The issue of health coverage in Namibia is becoming critical issue in health politics. Assume a large-scale study was undertaken to determine who is and is not covered. From this study, the following table of joint probabilities was produced.

| Age Category | Has health insurance | Does not have health insurance |
| ---: | ---: | ---: |
| $25-34$ | 0.167 | 0.085 |
| $35-44$ | 0.209 | 0.061 |
| $45-54$ | 0.225 | 0.049 |
| $55-64$ | 0.177 | 0.027 |

If a person is selected at random,
(i) what is the probability the person is between 25 and 34 years old and has a health insurance?
(ii) what is the probability the person is between 55 and 64 years old or does not have health insurance?
(iii) If the selected person is below 55 years of age, what is the probability that he/she has health insurance?
2.2 The proportion of people in a given community who have a certain disease is 0.005 . A test is available to diagnose the disease. If a person has the disease, the probability the test will produce a positive signal is 0.99 . If a person does not have the disease, the probability that the test will produce a positive signal is 0.01 . If a person tests positive, what is the probability that the person actually has the disease?
2.3 A record-store owner assesses customers entering the store as high school age, college age, or older, and finds that of all customers $30 \%, 50 \%$, and $20 \%$, respectively, fall into these categories. The owner also found that purchases were made by $20 \%$ of high school age customers, by $60 \%$ of college age customers, and by $80 \%$ of older customers.
(i) What is the probability that a randomly chosen customer entering the store will make a purchase?
(ii) If a randomly chosen customer makes a purchase, what is the probability that this customer is high school age?

## Question 3 [25 marks]

3.1 Suppose that the number of cars $X$ that pass through a car wash between 4:00 P.M. and 5:00 P.M. on a sunny Friday has the following probability distribution:

| $x$ | 4 | 5 | 6 | 7 | 8 | 9 |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $p(x)$ | $\frac{1}{12}$ | $\frac{1}{12}$ | $\frac{1}{4}$ | $\frac{1}{4}$ | $\frac{1}{6}$ | $\frac{1}{6}$ |

(i) Find the $E(X)$ and $\operatorname{Var}(X)$
(ii) Let $g(X)=2 X-1$ represents the amount of money in dollars, paid to the attendant by the manager. Find the attendant's expected earnings and variance of his earnings for this particular time period.
(iii) Find $F(x)$
(iv) What is the attendant's median earnings for this particular period?
3.2 The length of time required by students to complete a 1 -hour exam is a random variable with a density function given by

$$
f(y)= \begin{cases}c y^{2}+y & , 0<y<1 \\ 0 & , \text { elsewhere }\end{cases}
$$

(i) Find $c$
(ii) Assuming $c=\frac{3}{2}$, find $E(Y)$
(iii) Find $F(y)$
(iv) Use $\mathrm{F}(\mathrm{y})$ in (iii) to find $F(-1)$.

Question 4 [35 marks]
4.1 An allergist claims that $50 \%$ of the patients she tests are allergic to some type of weed.
(i) What is the probability that exactly 3 of her next 10 patients are allergic to weeds?
(ii) What is the expected number of patients who are allergic to weeds among her next 10 patients?
4.2 Customers arrive at a busy checkout counter at an average rate of 3 per minute. If the distribution of arrivals is Poisson,
(i) find the probability that in any given 5 -minute period there will be 2 or more arrivals[4]
(ii) If the arrivals of customers in different minutes are independent of each other, find the expected number of customers to arrive at the checkout counter in 5 minutes.
4.3 A lecturer of Chemistry has found that the time spent by students to complete a particular laboratory practical follows a normal distribution with a mean of 150 minutes and a standard deviation of 40 minutes.
(i) What is the probability that the particular laboratory practical takes between 2 hours 20 minutes and 3 hours 10 minutes?
(ii) The probability is 0.8 that a randomly chosen laboratory practical of this type can be completed in fewer than how many minutes?
4.4 According to Y.Zimmels(1983), the sizes of particles in sedimentation experiments often have a uniform distribution. In sedimentation involving a mixtures of particles of various sizes, large particles hinder the movements of small ones. Thus, it is important to study both the mean and variance of particle sizes. Suppose that spherical particles have diameters $(X)$ that are uniformly distributed between 0.01 and 0.05 cm . Find
(i) the probability that a random chosen particle has a diameter $(X)$ less than 0.035 ,
(ii) the expected mean of the volumes of these particles.
(Hint: volume of a sphere is $\frac{4 \pi r^{3}}{3}, r$ is a half of the diameter $(X)$
4.5 Times to gather preliminary information from arrivals at an outpatient clinic follow an exponential distribution with mean 15 minutes.
(i) Find the probability, for a randomly chosen arrival, that more than 18 minutes will be required.
(ii) What is the variance of amount of times for this exercise?

## END OF QUESTION PAPER

## Standard Normal Probabilities

Table entry for $z$ is the area under the standard normal curve to the left of $z$.
