PERMISSIBLE MATERIALS

1. Examination paper.

THIS QUESTION PAPER CONSISTS OF 10 PAGES (Including this front page)

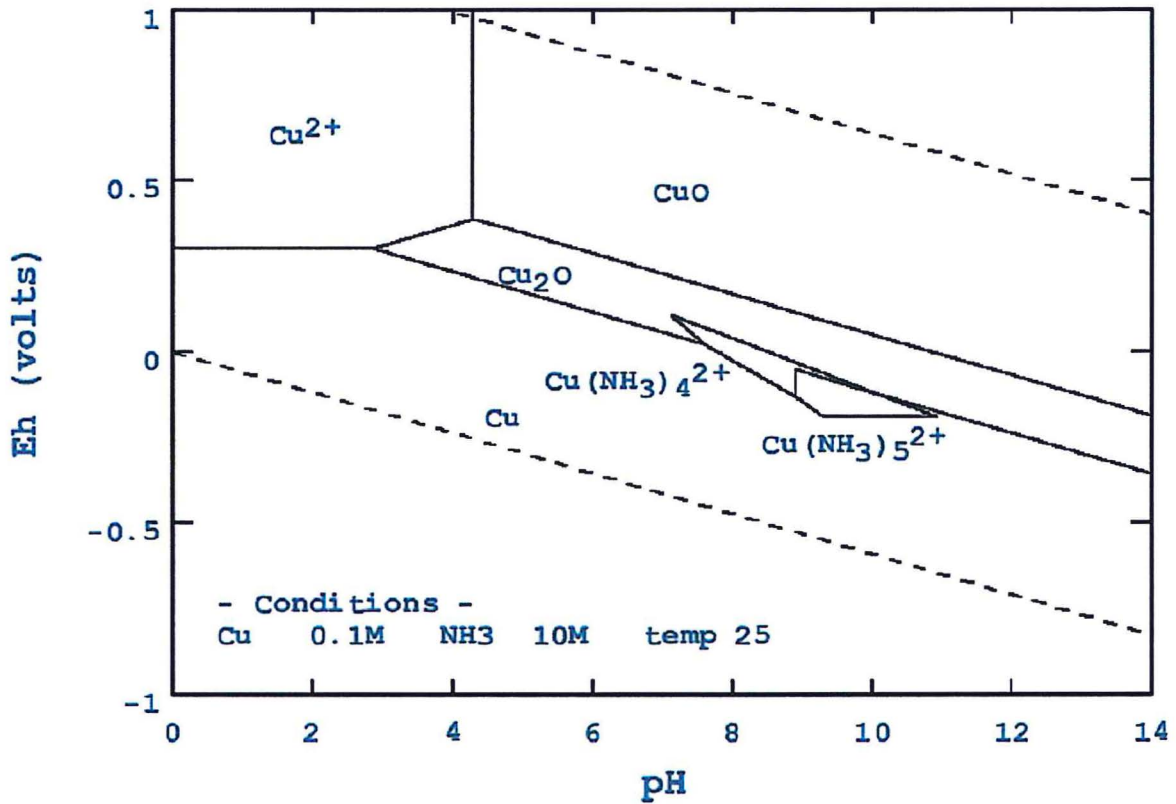

- b) Explain the stability of zinc in aqueous solution below the water stability lines at lower pH (say about 5.5) (3)
- c) Write the balanced chemical equation of the zinc reaction and water at the conditions given in b). (2)

Question 5 [8]

- a) What are the leaching conditions of copper sulphide that would result in elemental sulphur formation? (3)
- b) Discuss the disadvantages of using leaching conditions that result in the formation of elemental sulphur compared to sulphate formation. (5)

Question 6 [6]

Assume you have a solution containing Fe(II) and Mn(II) both at 1 mol/l. You saturate the solution in H_2S and set the pH at about 5.5.

Question 8

[4]

Use the Eh/pH diagram below to answer the following questions.

- Typically, gold is recovered by zinc cementation. How does zinc recover gold from cyanide solution. (2)
- Write down the equation(s) of zinc cementation of gold. (2)

- b) What is the flow rate of resin in the elution column? (4)
- c) What is the acid concentration in the barren solution from electrowinning? (8)
- d) What is the effect on the electrowinning operation of the small amounts of iron eluted from the resin? Suggest how the situation should be handled on the plant. (4)

9.2 Discuss the factors that determine the operating current density in copper electrorefining. (5)
